

Project Veraison

Attestation Verification Components

CCC TAC review 2026

Project Submission deltas

- No change from last year
- Budget usage (to date CY26)
 - Travel: no budget usage
 - Infrastructure: no budget usage
- Sandbox level is still appropriate

openssf best practices **passing**

- Part-time PM role, funded by CCC, has proposed staffing
- Security reporting mechanism shown to be effective
 - 2 (minor) reports received

Key Accomplishments

- Fujitsu Research Team is now an active contributor to project
- Steady increase of RUST implementation
 - 5 New RUST repositories added
- Veraison CCA Coserv Demo is fully functional
- Linaro now has a working Deployment of CoServ End point
- Continued Active Contributions from Arm & Oracle teams
- Successful Engagement with LF Mentees
- Veraison represents a Complete RATS Verifier

Technical Progress - codebase

- Support for multiple Attestation schemes
 - CCA / AMD SEV-SNP / PSA / TPM / DICE / Oracle CC / Intel TDX
- Re-architecture of Provisioning Store
 - Natively support storage of CoRIM & CoMIDs
 - Design to support multiple RDBMS, SQLite, Postgres and MySQL currently supported
 - Supports Improved LifeCycle of Provisioning components
- A new version V2 of RATSD now available
 - Supports a complete signed Composite Attester Evidence – with Lead Attester token
- CoRIM now supports core PKIX Path Validation, using x5chain header in *cose_sign1*
- End to End Demo including Veraison as CoServ Endorsement Service fully functional
- Support for Multi Verifier coordination – This is Work in Progress
- Projects completed in LF mentorship

Technical Progress - standards

➤ Standards Co-authoring & reference implementations

- CoRIM (model for endorsement / ref value supply to Verifier)
 - IETF / TCG
- CMW Submitted to IESG for Publication – RFC 9999
- EAT Media Types is now an RFC 9782
- CoServ and Multi Verifier drafts are now Adopted in IETF RATS WG
- OCP Security WG absorbing work from IETF standards
- Composite Attester Draft is been worked upon!

github stats

- 51 individual contributors (+15)
 - 21 organisations (+6)
- Community split:
 - Veraison services: 48 stars, 23 forks, 17 contributors
 - CoRIM: 24 stars, 37 forks, 20 contributors
 - go-cose: 63 stars, 30 forks, used by 143 other projects, 18 contributors
- All repo stats:
 - 175 PRs merged in past year
 - 116 issues closed in past year
 - 219 stars
 - 138 forks

Veraison Adoption Across Research Initiatives

- Samsung Islet Project
- TrustMee: EU Elastic Project
- Remote Attestation on Arm TrustZone with OPTEE & Veraison

From IISec - : Institute of Information Security, Japan

- Verifiable AI Agent Attestation with Veraison – Research work from Tyche Institute (Estonian non-profit)
- Intern from Huawei Research working on GP EAT Profile with Veraison
- [Standards based Remote Attestation](#) from Politecnico di Torino, Italy

Veraison – for production deployments

- Solidlgm uses Veraison tooling to produce CoRIMs for D7-PS10xx Reference Manifest
- Oracle cloud Veraison based verifier deployments
- NVIDIA use of CORIM creation tool from veraison/cocli
 - wider spread of cocli usage apparent

➔ Integrations with other OSS projects

➔ [Confidential Containers Project](#) is using the *rust-ear* library

➔ Keylime

Veraison Outreach

- Veraison Status Update & Work in Standards - Presented during Global Platform Fall Event 2025
- Veraison handling of Composite Attestation Use Cases – Presented in FOSDEM 2026
- Veraison for Complex Data Centre Scenarios – Presented in OCP EMEA Summit 2026

Futures

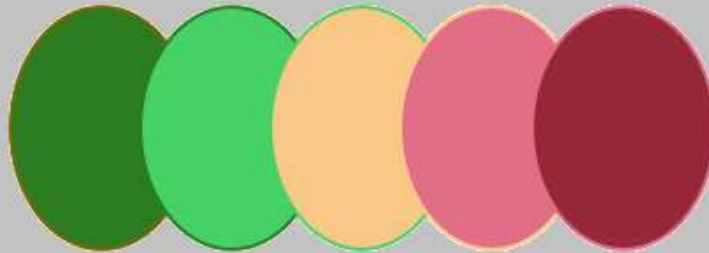

- ROADMAP

- Multi Verifier interactions for compound attestors
- Attestation Tooling Enhancements
- CCA scheme updates with generic verification benefits
 - e.g. Event Log Handling

- RISKS

- Core Team Membership Update
 - One member changing Org
 - One individual retiring
